

John Froeschke is a fisheries biologist-statistician at the Gulf of Mexico Fisheries Management Council. He earned his Ph.D. from Texas A&M University - Corpus Christi where he worked on developing predictive models used to improve our understanding of environmental factors affecting fish distribution and abundance in the Gulf of Mexico. Prior to this, John completed an M.S. in biology at California State University, Northridge and worked as fish biologist at Occidental College in Los Angeles. John worked as a scientific diver for several years, and he remains active as a recreational scuba diver and angler.
